

Company Background

Microban Products Company originally received its commercial start from Clinitex Corporation, a company that three biomedical engineers, Glenn Cueman, Barnwell Ramsey and Henry Richbourg, had formed in 1988. Clinitex produced orthopedic devices and specialty medical products, many of which incorporated the Microban® technology that protects products against the growth of bacteria and other contaminants.

With a background in global biomedical product development from their days at the Zimmer Division of Bristol-Myers, these three entrepreneurs saw the potential to incorporate safe, long-lasting and effective antimicrobial ingredients into products other than medical devices.

Today, Microban Products Company has successfully incorporated its technology into various materials for everyday consumer products as well as medical and commercial applications. It is this proprietary technology that uniquely positions Microban Products Company as the leader in providing safe, durable, effective, built-in antimicrobial, product protection.

Additionally, Microban Products Company is building a recognized consumer brand name through its relationships with its partners as well as its own advertising and public relations efforts. The combination of this unique technology and marketing strategy distinguishes products with Microban® protection in the marketplace and provides Microban Products Company and its partners with a competitive advantage.

Meeting the Challenge

At Microban Products Company, we understand the impact of microorganisms in the products you use every day, and we have spent years advancing innovative ingredients and technologies to limit their growth in homes and commercial settings. We consider it important enough to make it our only business.

Microban® antimicrobial protection was developed to neutralize bacterial and fungal growth in products where they can live and breed. This technology can be applied to many products used in our everyday lives - in the kitchens and bathrooms of our homes, in the work place,

in restaurants, public buildings and health care facility buildings. In any product where the growth of bacteria, mold and fungus

can be a problem, Microban antimicrobial technology can provide safe, effective, built-in protection.

Microban antimicrobial protection is built in to inhibit the growth of bacteria, mold or fungus that cause odor and stains in products.
